📄 Profile

Backend Software Engineer with 3+ years of experience building scalable, real-time web applications with PHP and Laravel. Specialized in modular, Domain-Driven Design (DDD) architectures, with hands-on experience in payment gateway integrations (Paymob, Tamara, Moyasar), Filament, Redis, and WebSockets. Skilled at leveraging AI tools (Claude, ChatGPT) to accelerate delivery without compromising code quality. Delivered solutions across real estate, delivery, e-commerce, and healthcare domains.

📁 Professional Experience

Back-End Developer

08/2024 – Present | New Damietta, Egypt

Athr

- Built modular Laravel applications using DDD and nwidart/laravel-modules for maintainable, decoupled domains.
- Integrated payment gateways (Paymob, Tamara BNPL) with secure, HMAC-verified webhooks via Filament.
- Built real-time features (Redis, Reverb, WebSockets) and RTL/dark-mode Filament dashboards.
- Resolved performance bottlenecks (indexing, caching, FrankenPHP) for sub-second response times.
- Used AI tools (Claude, ChatGPT) and Action Pattern/CQRS to speed up delivery with clean code.

Software Engineer

03/2024 – 08/2024 | remotly

Emcan

- Developed RESTful APIs integrated with admin dashboards and frontend systems across multiple projects.
- Built delivery and order-tracking systems with real-time status workflows.
- Integrated third-party e-commerce platforms (Shopify, Salla) to extend system interoperability.
- Delivered multiple Laravel Blade projects, strengthening full-stack development skills.

Laravel Back-End Developer

09/2023 – 12/2023 | Mansoura, Egypt

Online Training

- Built backend services in PHP and Laravel, integrating third-party APIs and optimizing database queries.
- Participated in structured code reviews to reinforce best practices and code quality standards.

🧠 Skills

Languages

- PHP, SQL, JavaScript, HTML, CSS

Architecture & Design

- Domain Driven Design (DDD), Clean Architecture, SOLID Principles, Design Patterns, REST API Design, System Design

Real-Time Technologies

Redis, Socket.IO, Laravel Reverb, Pusher, WebSockets

Tools

Git, GitHub, Postman, ClickUp, Jira

Frameworks & Tools

Laravel, nwidart/laravel-modules, Filament, FrankenPHP

AI-Assisted Development

Practical experience using Claude, ChatGPT, and Copilot for code generation, debugging, architecture review, and documentation to accelerate delivery

DevOps & Infrastructure

Linux, Nginx, Apache, Supervisor, Queue Workers, PM2

Soft Skills:

Teamwork & Collaboration, Communication Skills, Work Under Pressure, Problem-Solving

Projects

Tijora — Multi-Tenant SaaS Platform (Team Project, In Development)

- Designed and built a multi-tenant SaaS platform (Laravel + stancl/tenancy) merging an e-commerce storefront with an SMM panel — each tenant provisioned with a fully isolated database and its own custom domain/subdomain
- Automated the full per-tenant infrastructure lifecycle — DNS zone provisioning, SSL issuance/renewal, and reverse-proxy configuration — via a queued job pipeline (provision → verify → health-check → renew → suspend → deprovision)
- Implemented a multi-gateway payment system with per-workspace gateway connections, subscription billing, wallet balances, payouts, and refund workflows

Amlak — Real Estate Platform (Laravel, Filament, Real-time Chat, WebSockets)

- Built the platform end-to-end connecting buyers, sellers, and companies with smart in-app chat and detailed property listings.
- Designed a scalable database structure supporting multiple company and listing types.

Zawada — School Canteen NFC Wallet Platform (Solo Project, In Development)

- Designed the ERD and a fully modular DDD architecture (8+ bounded contexts: Identity, Child, Order, Product, Device, Otp, Admin) powering a multi-role platform connecting parents, students, schools, and canteen branches through NFC-enabled wristbands and cards
- Built a dual-wallet financial system — a parent wallet funding pre-orders and a per-student prepaid allowance with daily spending limits — with Paymob-integrated top-ups, allergy-aware purchase restrictions, and a school-credit fallback that keeps students able to eat even without an active balance
- Implemented end-to-end NFC device lifecycle management: scanning, linking, and suspending student wristbands/cards, plus an in-app device store for ordering NFC hardware by type and color

Bedayt Sekon — Mental Health App (Flutter, Real-time Video/Chat, Secure Payments)

- Delivered an end-to-end app connecting patients with therapists via real-time chat and video sessions.
- Integrated secure payment gateways and a complete session management system.

Education

Faculty of Computer and Information Science

09/2020 – 07/2024 | Mansoura, Egypt

Mansoura University

- Graduation Project Grade: Excellent
- Cumulative Grade: Very Good

Languages

Arabic

Native

English

Conversational

EXTRACURRICULAR ACTIVITIES

Team Leader, Graduation Project:

- **Team Leadership** – Led a multidisciplinary team throughout development.
- **Project Management** – Managed workflow, coordinated tasks, and ensured timely delivery.
- **Platform Development** – Oversaw the creation of a web platform connecting patients, doctors, and pharmacists.
- **Collaboration & Communication** – Fostered teamwork to achieve project goals efficiently.
- **Quality & Delivery** – Ensured a successful final product that met all requirements.
